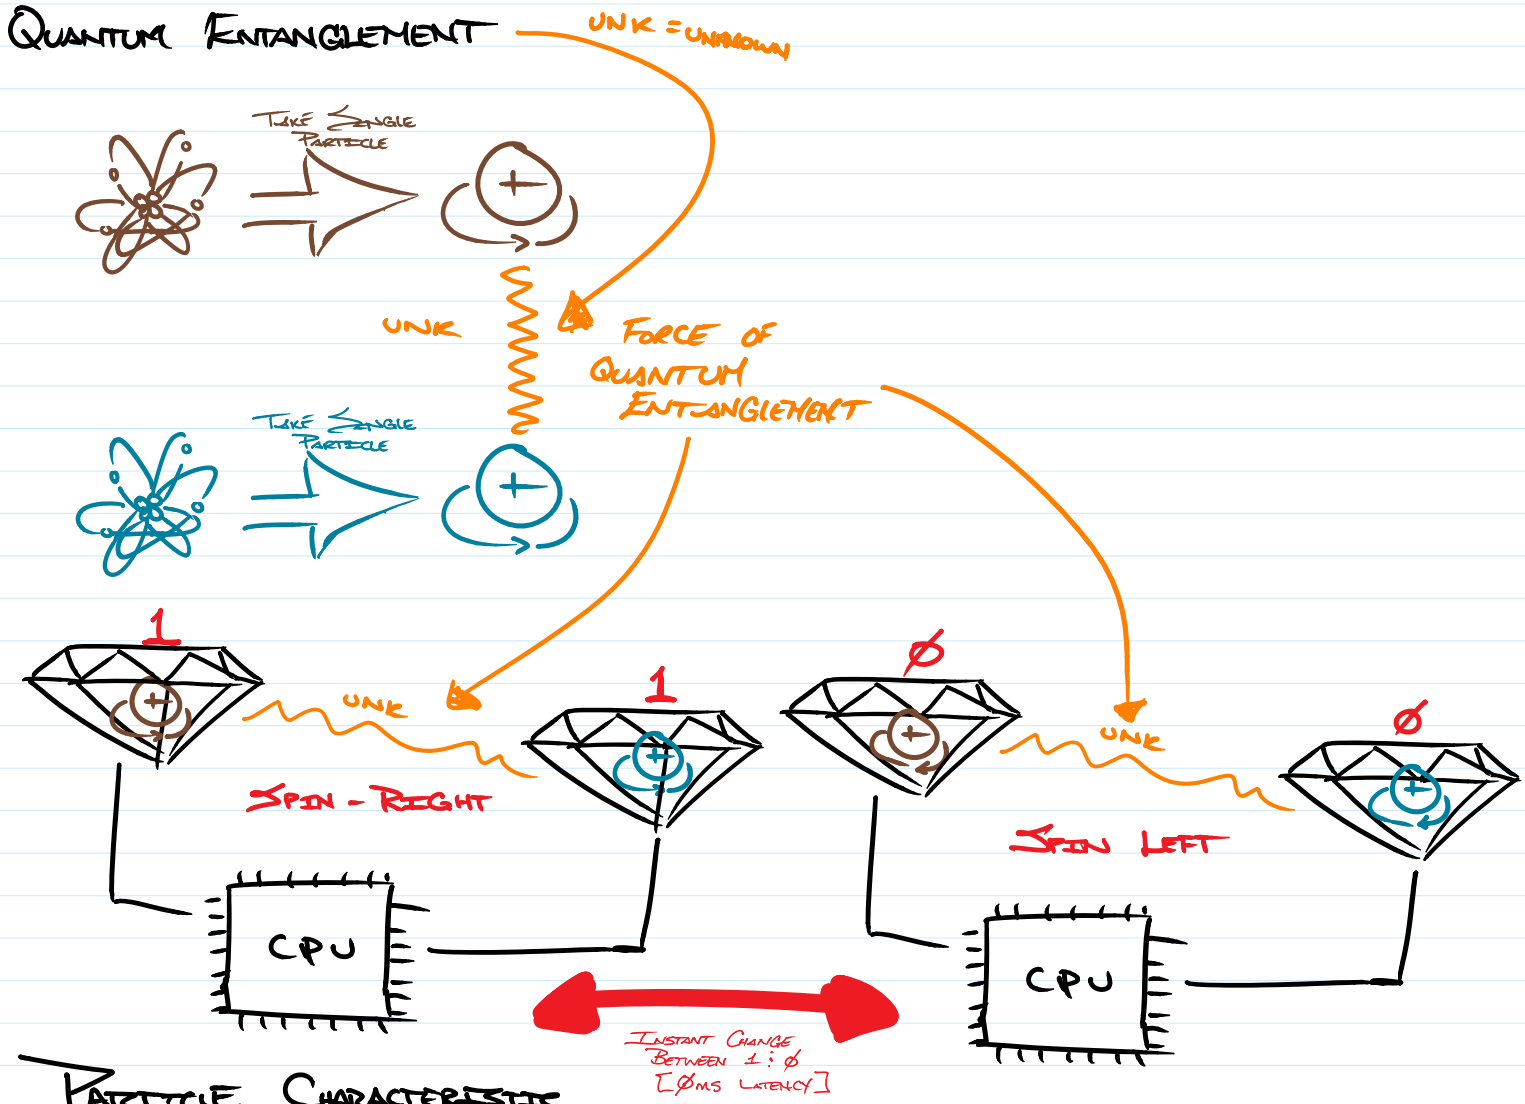
Quantum entanglement in computing

Thursday, June 5, 2014 12:22 PM



PARTICLE CHARACTERISTIC

SPIN (LEFT = Ø ; RIGHT = 1)

- MASS
- SPEED
- POLARIZATION (NEG OR POS)

MANIPULATE WITH HIGGS BOSON?

EACH PARTICLE COULD CARRY AT LEAST 3 TIMES MORE INFORMATION THAN JUST A 1 OR A Ø.

EXAMPLE FRAMES

1	Ø	1	Ø
FFF000	000FFF	FF00FF	00FF00

QE BIT THEORY [ONLY MANIPULATE SPIN]

QE HEX THEORY [MANIPULATE AS MANY PARTICLE CHARACTERISTICS AS POSSIBLE]

HOW DO YOU ENTANGLE PARTICLES?

" " " MANIPULATE "

DO THEY HAVE TO BE IN A DIAMOND?

HOW MUCH ENERGY IS REQUIRED FOR MANIPULATION?

WHAT ABOUT A SERIES OF NEAR INSTANTANEOUS MANIPULATIONS ON FEWER PARTICLES TO BUILD BYTES WITH A DAEMON WATCHING THE PARTICLES?
